

CHIMERA

MECHANICUS TRINITY

THREE FORCES. ONE ENGINEERED SYSTEM.

Brand Bible

Identity, visual system, interface language, motion and product-family rules.

01 / BRAND IDEA

Transformation, not conversion.

Chimera takes legacy learning apart, preserves what matters, and recombines it into maintainable digital learning.

SOURCE

Legacy PowerPoint is raw material, not the final model. Chimera ingests content, notes, media, geometry and metadata.

RECOMBINE

Content becomes a structured scene/storyboard system that can be edited, reviewed, enhanced and validated.

DEPLOY

The same source can produce SCORM, QTI, HTML, Word and portable project artifacts.

SOURCE → STORYBOARD → ENHANCE → VERIFY → DEPLOY

The visual system mirrors the product architecture: distinct parts become one stronger system.

Brand principle: show transformation as structured assembly, not magic.

02 / THE CREATURE

Mechanicus Trinity

A lion, an eagle and a dragon fused into one engineered form. Wings connect the creature to flight without borrowing official military insignia.

LION / BUILD

Strength · execution · structural confidence

EAGLE / ELEVATE

Vision · adaptability · flight · perspective

DRAGON / TRANSFORM

Intelligence · recombination · controlled power

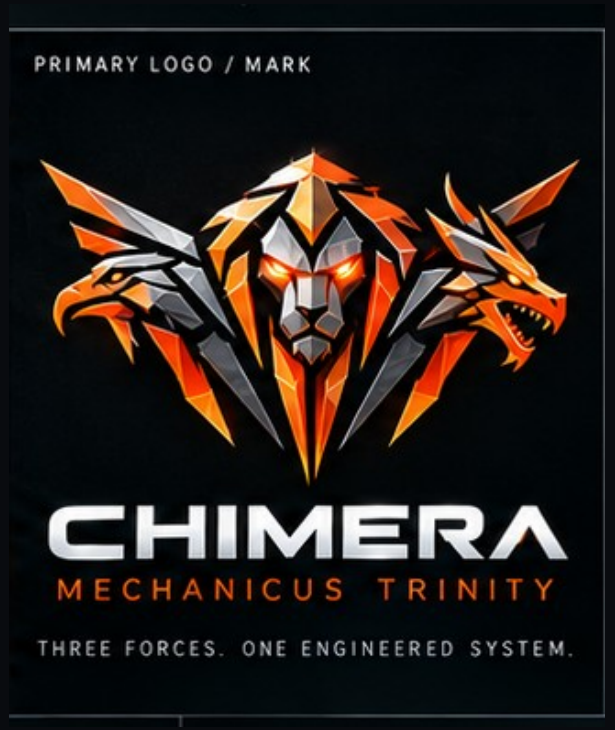

Pose rule: the three heads remain individually readable while the body reads as one creature.

Use the full creature for hero art, launch material, patches and large-format identity. Do not use it as persistent UI wallpaper.

03 / MARK SYSTEM

From beast to badge.

The primary mark compresses the Trinity into a compact, symmetrical emblem that survives product chrome and small-format use.

PRIMARY

Use the full three-head mark for brand moments, splash screens, headers and product family lockups.

COMPACT

Use the simplified app icon where the full creature would become noise: favicon, app tile, toolbar, installer.

CLEAR SPACE

Keep at least one eye-width of clear space around the mark. Never crowd it with controls or other badges.

BACKGROUND

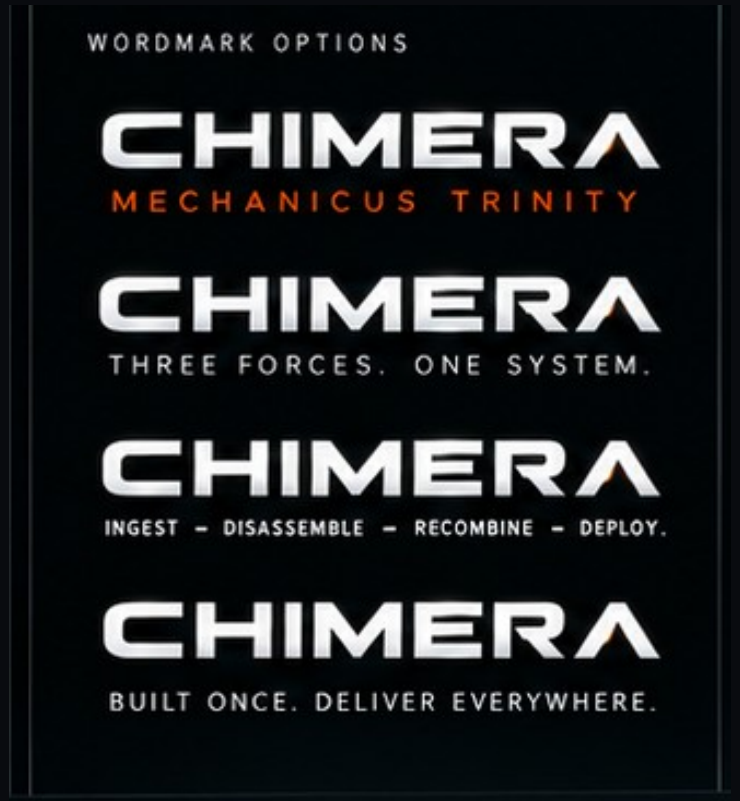

Preferred: Void or Carbon. Light-background versions must keep the creature high-contrast and sharply defined.

Production rule: simplify detail before shrinking. Never merely scale a high-detail illustration to favicon size.

04 / WORDMARK

CHIMERA is the product. Mechanicus Trinity is the creature identity.

Keep the product name clean and legible. The creature descriptor is optional and should never compete with CHIMERA.

PRIMARY LOCKUP

CHIMERA + mark. Use for product UI, web headers, documentation and launch materials.

DESCRIPTOR LOCKUP

CHIMERA / MECHANICUS TRINITY. Use selectively in brand and campaign material, not in routine controls.

TAGLINE

Preferred system line: “THREE FORCES. ONE ENGINEERED SYSTEM.” Product line: “LEARNING CONTENT. REBUILT.”

CASE & SPACING

Brand display is uppercase with generous tracking. Body/UI text uses sentence case for speed and readability.

05 / COLOR

Heat against aerospace graphite.

Orange is transformation energy. Violet is the shared family link to Pythia. Neutral metals carry the interface.

VOID #090B0F

Primary background

CARBON #151A20

Panels / surfaces

GUNMETAL #28313A

Borders / structure

TITANIUM #B9C2CA

Secondary text

WHITE HOT #F3F6F8

Primary text

IGNITION #FF6A21

Chimera primary

AFTERBURN #FFB02E

Secondary heat

PYTHIA LINK #7F5CFF

Shared family accent

Semantic UI colors may use functional green, red and cyan. They are state signals, not brand colors.

06 / TYPOGRAPHY

Technical, fast, readable.

The identity should feel engineered without becoming a parody of military stencil type.

CHIMERA

DISPLAY / LIBERATION SANS NARROW BOLD

Import. Rebuild. Validate. Deploy.

UI + BODY / LIBERATION SANS

DISPLAY

Uppercase; 0.08-0.16em tracking; short labels; headings; product names.

BODY

Sentence case; compact paragraphs; generous line-height; never fake condensed body copy.

NUMBERS

Use tabular figures where alignment matters: versions, readiness, timestamps, package metrics.

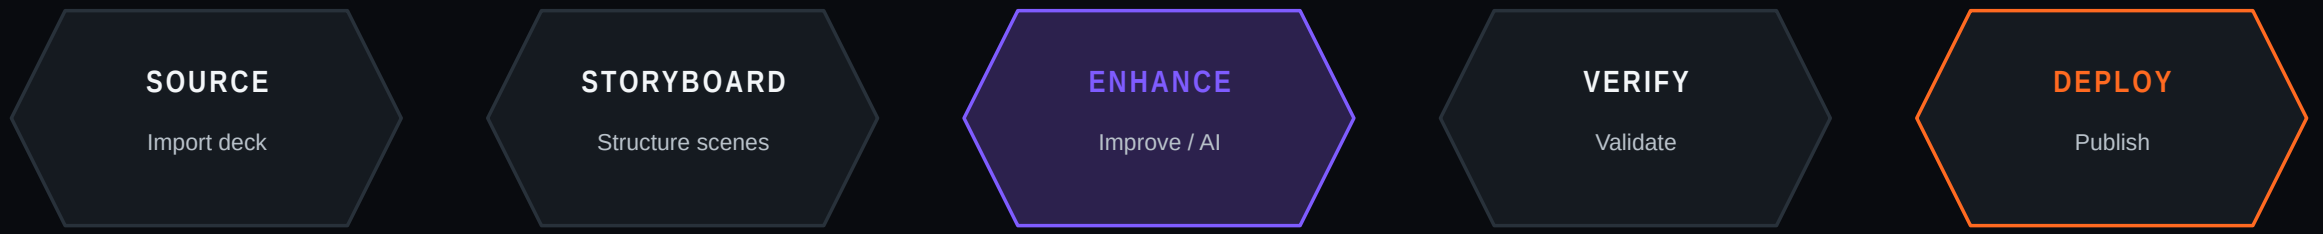

TONE

Sharp cuts belong in marks and dividers. Do not distort text to imitate the logo.

07 / INTERFACE LANGUAGE

Creative IDE, not generic enterprise SaaS.

The product UI should feel like a mission workstation: one command layer, clear navigation, contextual controls, and strong visual state.

NAVIGATION

Persistent project + scene navigation. Current location is obvious. Avoid stacked toolbars and duplicated commands.

CANVAS

The work surface dominates. Tools appear contextually around the selected scene or element.

INSPECTOR

Properties and readiness live in a disciplined right rail. Expand only what the author needs now.

Orange = author action / transformation. Violet = Pythia / intelligence. Neutral = structure. Semantic colors = status only.

08 / MOTION

Assemble. Lock. Deploy.

Motion should explain transformation and state change. Nothing should shimmer just because the GPU is bored.

ASSEMBLE

Panels and marks can arrive as aligned segments that resolve into one form. Use on splash/brand moments only.

LOCK

Selected objects snap into position with a short, confident settle. Avoid elastic or playful bounce.

DEPLOY

Publish/export uses forward motion and completion, not fireworks. Progress should feel operational.

120–180 ms

MICRO INTERACTIONS

220–320 ms

PANELS / STATE CHANGE

600–900 ms

HERO / BRAND REVEAL

Respect reduced-motion settings. Never make glow, particle effects or animated backgrounds necessary to understand the UI.

09 / VOICE

Command clarity without command-post cosplay.

Chimera speaks in strong verbs, concrete objects and visible outcomes.

DO

Import deck
Build scene
Add assessment
Validate course
Deploy package

AVOID

Leverage content
Experience the magic
Revolutionize your learning
AI-powered everything
Mission-critical synergy

SYSTEM VOICE

Short labels. Specific warnings. Human error messages. BLUF first when stakes are high. Explain what changed and what to do next.

Brand voice: engineered, capable, direct, curious. Never macho. Never bureaucratic. Never mystical.

Pythia may sound interpretive. Chimera sounds constructive.

10 / PRODUCT FAMILY

Pythia thinks. Chimera transforms.

Sibling products share a universe, not a costume.

PYTHIA

INTELLIGENCE SYSTEM

Know → Interpret → Advise

Cool violet / cobalt energy. Oracle, interpretation, evidence, foresight.

CHIMERA

TRANSFORMATION SYSTEM

Ingest → Recombine → Deploy

Ignition orange / amber. Construction, transformation, interoperability, delivery.

SHARED DNA

Void backgrounds · metallic neutrals · geometric display type · restrained glow · precision iconography · product descriptors · aerospace-adjacent discipline.

Never recolor one product to impersonate the other. The family resemblance comes from structure and behavior.

11 / GUARDRAILS

Keep the beast disciplined.

The brand works because the heat is controlled.

DO

Use dark neutral surfaces with strong contrast.
Reserve orange for meaningful action and transformation.
Use the full creature in campaign/hero contexts.
Use the compact mark in product chrome.
Keep icons thin, technical and consistent.
Let whitespace and alignment carry sophistication.
Keep military influence abstract and aerospace-driven.

DON'T

Flood every surface with orange or glow.
Use official USAF marks, seals or uniforms as brand decoration.
Shrink the detailed creature until it becomes visual gravel.
Mix Pythia violet into every Chimera screen.
Use faux-stencil fonts for normal UI.
Add random wings, flames or claws to routine controls.
Turn transformation into fantasy magic.

12 / SHIP IT

From brand board to product tokens.

This system is designed to move directly into the Chimera repository as design tokens, assets and interface rules.

```
:root {

  --chimera-void: #090B0F;
  --chimera-carbon: #151A20;
  --chimera-gunmetal: #28313A;
  --chimera-titanium: #B9C2CA;
  --chimera-white: #F3F6F8;
  --chimera-ignition: #FF6A21;
  --chimera-afterburn: #FFB02E;
  --family-pythia: #7F5CFF;

}
```

NEXT BUILD TARGETS

1. SVG mark + favicons
2. Design tokens
3. App-shell reskin
4. Contextual command model
5. Motion + loading
6. Accessibility QA
